

Industrial Site Medical Services - a bespoke solution to a unique workplace

24 hour support

24 hour operations need a team of Drs and nurses who can respond and help treat, reassure, triage, and expedite emergency care for your staff. This reduces harm from incidences and begins a fit for purpose therapeutic relationship

Post incident drug screen

ACC process

The ACC process can be held up by access to primary care and ED departments. Our team has Drs that can assess the patient within the first 24 hours to initiate ACC documentation and produce fitness for work ACC certificates as registered ACC Providers

Early treatment

Often employees time off is extended due to waiting for scans, Drs appointments and interventions like fracture clinic or hand therapy. Our team is able to expedite this and get the correct specialists involved early so that the journey back to healing is not delayed

Back to work planning

The gradual return to work process after illness or injury can be delayed by employees going to primary care /GPs that do not understand the unique workplace. We work with shift and area supervisors to work out safe and efficient back to work planning

Barriers

Often employees who have a therapeutic relationship with us, develop a trust that means that any roadbumps such as complications of injuries or risks to reinjury can be picked up early and communication between Dr/Nurse, Patient and Employer is able to continue

Quality Data and Annual Monitoring

With a holistic caring relationship, employees are much more likely to engage with annual monitoring (spirometry , audiology, cardiorespiratory) and preventative programmes
